FEE: The presentation is free for members, \$5 for non-members

MEMBERSHIP: For membership application form please check: <http://www.iasea.org/Members.html>

ABSTRACT:

The web started on the PC and within a few short years it quickly penetrated into our cellphones, tablets, TVs and will soon get into just about any piece of hardware we own or interact with. Such explosive growth of "smart" phones with intelligent software driving "dumb" hardware devices is creating a pretty amazing set of possibilities and opportunities. In this talk, we briefly discuss some of the more fundamental changes that have recently emerged and present few interesting trends that are currently happening and will soon deeply affect our daily lives.

BIO:

Ali Khoshgozaran received his bachelor in computer engineering from Sharif University of Technology, and his masters and PhD in computer science from the George Washington University and University of Southern California, respectively. His PhD dissertation was related to the privacy aspects of mobile and social location based services. He previously worked at Yahoo! as a software engineer and at Microsoft as a program manager. He is now a senior technologist with Samsung Electronics R&D center.
